

# Renewable energy in Europe

## Michal Futrega, Ilona Grabowicz, Maja Szlenk

Projekt 3 z przedmiotu Programowanie i Wizualizacja Danych w R. Podoba Ci się ta grafika? Zagłosuj na nią wchodząc na stronę zapisaną kodem QR.

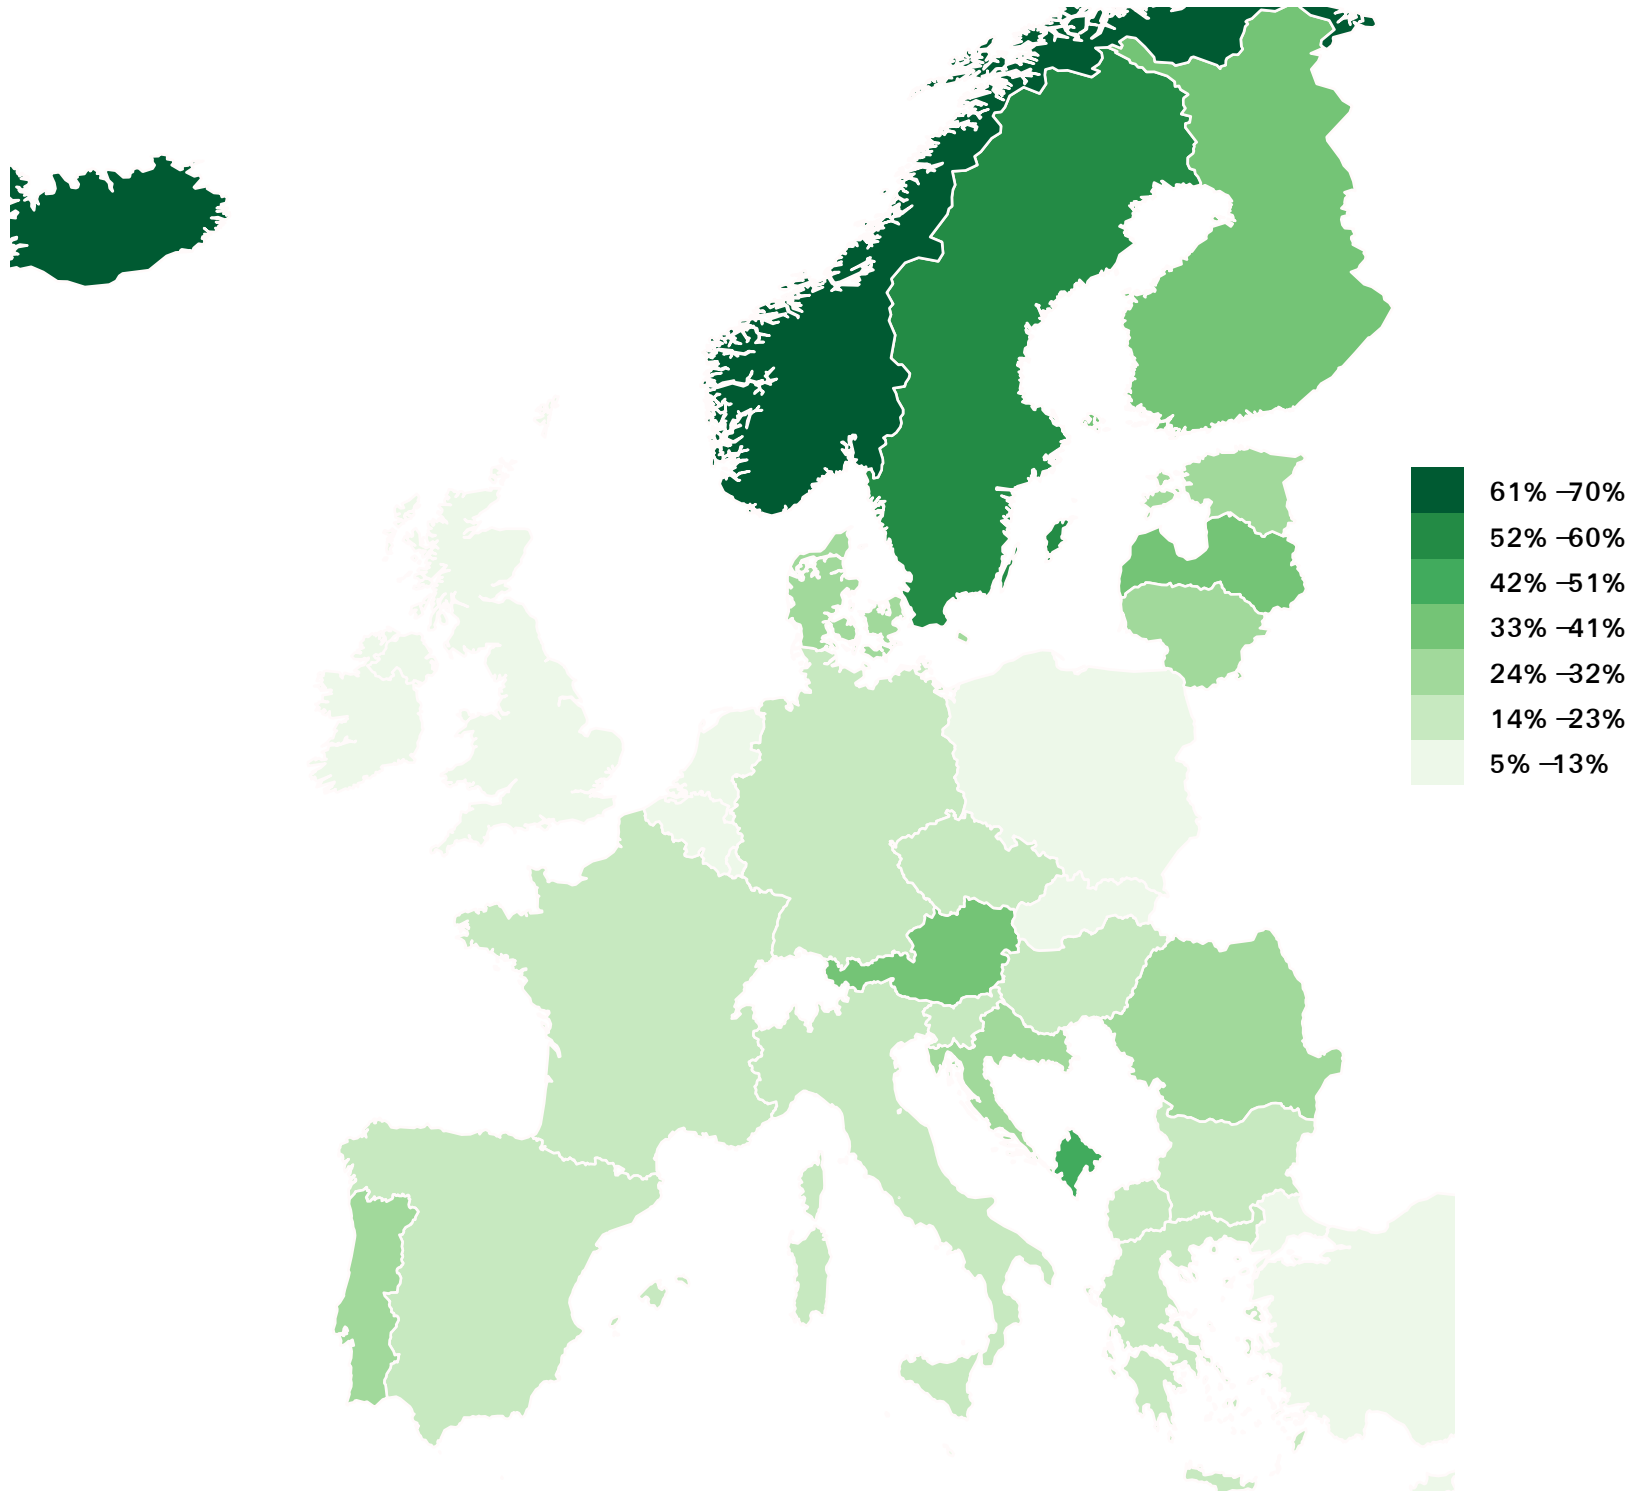

Share of renewable energy in gross energy consumption  
In 2015

Top panel of the poster shows a map of Europe with the color-coded share of the renewable energy sources in the gross energy consumption. For the countries colored with white there were no data available.

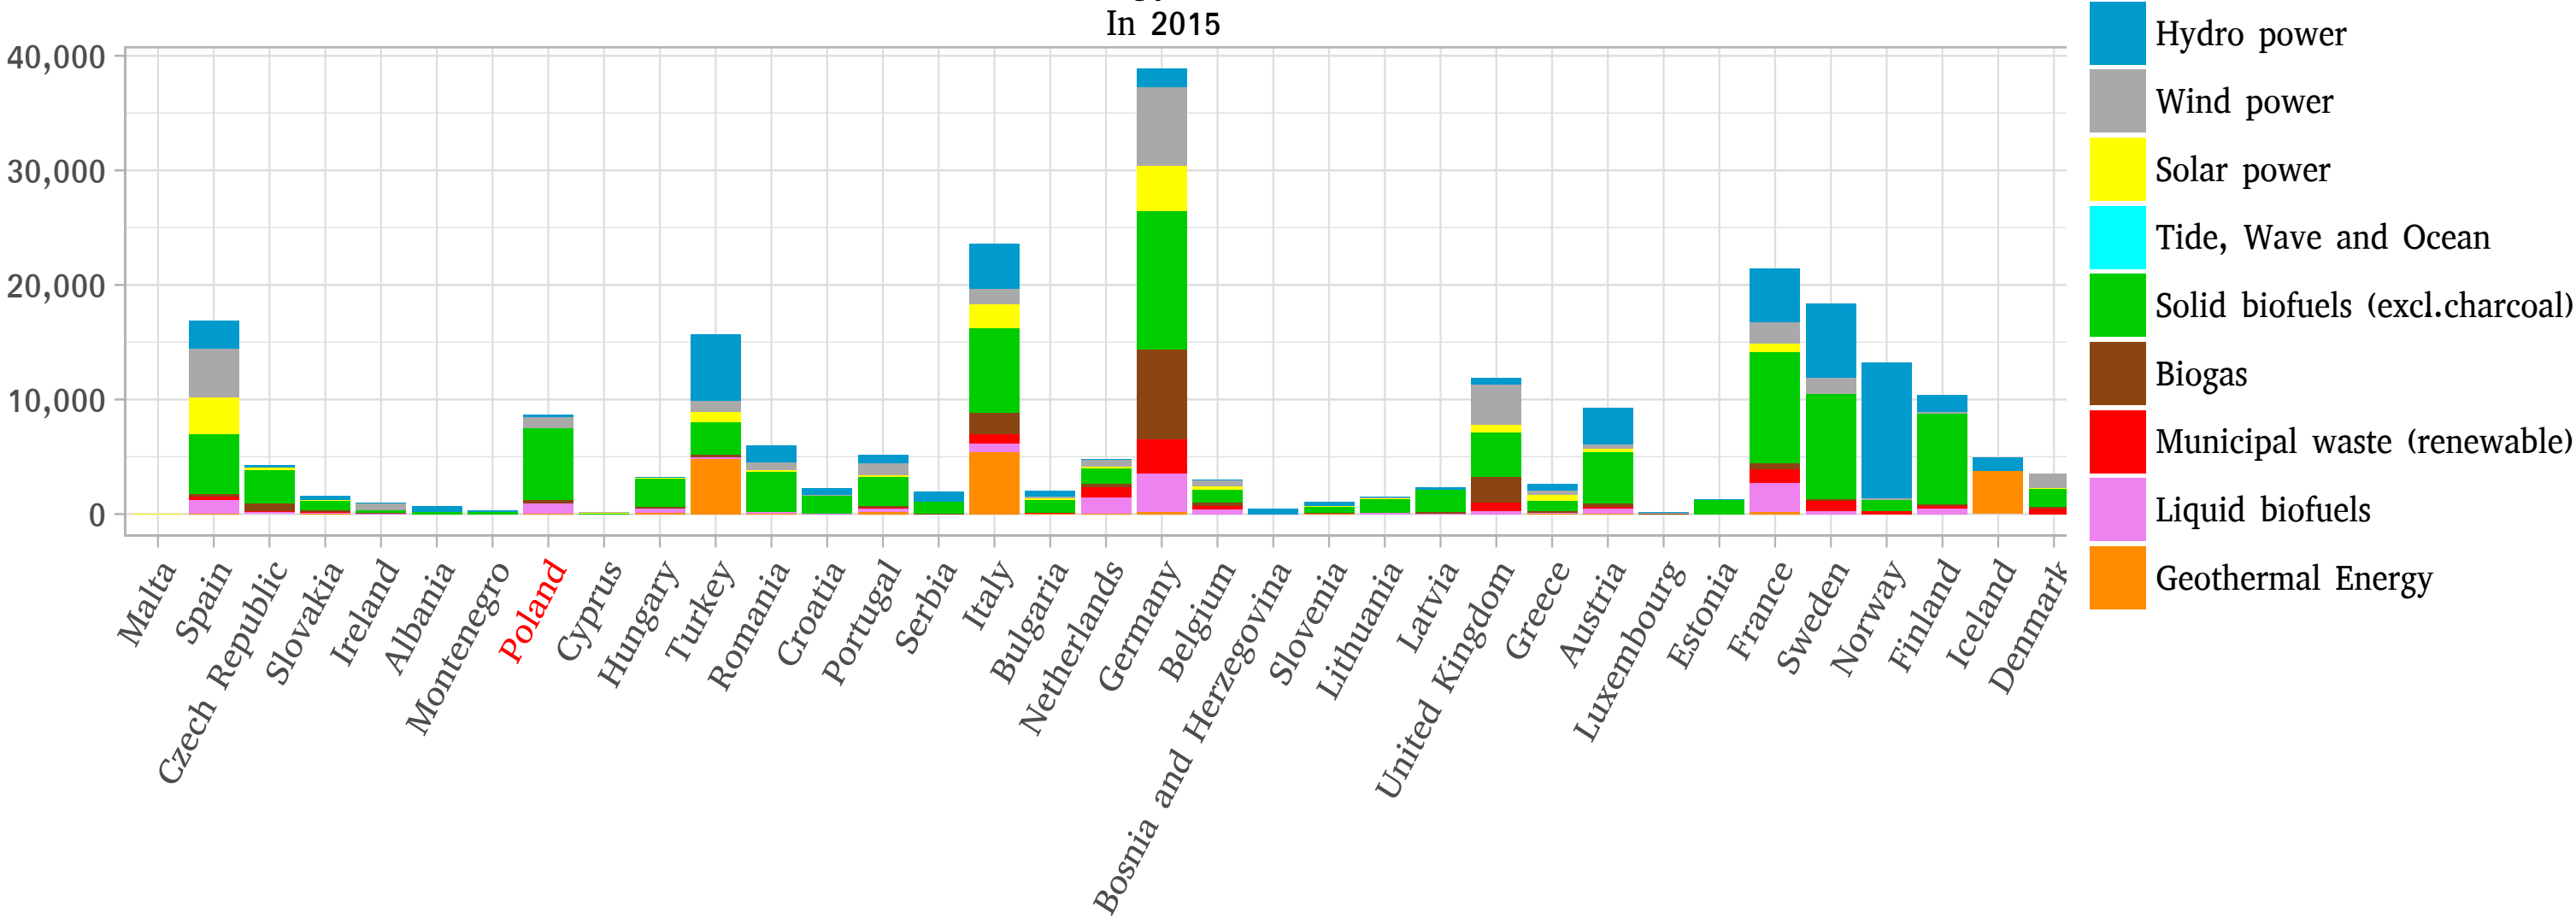

The next panel shows the absolute values of the energy production from renewable sources for each country. Bars for each country are divided into fractions coming from different energy sources. Solar power includes: thermal and photovoltaic; liquid biofuels include: biogasoline, biodiesel, other liquid biofuels and bio jet kerosene.

The last panel shows electricity prices of 1 kWh in each country, normalized for the purchasing power. Countries are sorted descending according to the average price.

Thousand tonnes of oil equivalent (TOE)

Production of energy from renewable resources  
In 2015

Electricity prices for household consumers  
In years 2007 – 2017
